**COMPACT POWER SYSTEMS LAUNCHES ITS NEWEST  
CELLBOOST™ FOR NINTENDO GAME BOY ADVANCE SP AND DS AT E3**

*Innovative Product Adds Six Hours of EXTRA Playing Time*

*Company Also Unveils Anywhere, Anytime Power Solution for the NEW Sony PSP*

**LOS ANGELES, CA (May 3, 2005)** – You’re playing “The Legend of Zelda: The Minish Cap” and Link is shrunk down to an unusually small size when your battery light goes on. It’s Compact Power Systems, LLC. (CPS), to the rescue. CPS, makers of **Cellboost™** portable power solutions, today announced they will launch the hotly anticipated Cellboost for Nintendo Game Boy Advance SP and DS systems, providing handheld gamers the ability to continue playing for an additional six hours when batteries die and recharging is not an option, at the Electronic Entertainment Expo (E3) 2005, May 18-20 at the Los Angeles Convention Center. And never fear PSP users, CPS will also unveil the Cellboost for Sony PSP at the Expo.

“Players don’t want to have their Nintendo Game Boy battery give out just as Princess Zelda’s been turned to stone,” said Kai Clarke, president of CPS. “Cellboost battery power solves the problem by providing an additional six hours of playing time for Nintendo handheld systems.”

Featuring the same patented technology as the company’s popular Cellboost product for the leading cell phone brands, the Cellboost for Nintendo Game Boy Advance SP and DS systems offers instant and inexpensive battery power for today’s gamers when batteries die or are low and recharging is not an option. The pocket-sized accessory, inserted into the same port as the standard AC charger, restores power to dead or dying devices within seconds, without using electrical outlets, battery changes or cords. The Cellboost units simultaneously power and charge the device; can be used in one charging session or several; and can be thrown away when the power is exhausted.

CPS will also unveil the eagerly awaited Cellboost for Sony PSP. The model, which fits seamlessly into the existing PSP design, allowing gamers a better grip, will be on display at the Cellboost exhibit inside the Dream Gear booth, #2140 in the West Hall.

“The Cellboost for Sony PSP is the next unique offering for the legions of handheld gaming fans,” said Clarke. “CPS is excited to launch this product at E3. We invite anyone interested to stop by our booth and have all their gaming accessory needs met.”

**About Compact Power Systems, LLC.**

Compact Power Systems is a global provider of portable power solutions designed to overcome today’s energy limitations for cellular phones, smart phones, camcorders, Apple iPods, Nintendo portable systems, and other mobile devices.
